Available in four weights, Crickle features a roughened outline that gives it an energetic, dynamic look, as if it had been scribbled by a pen. For strikethrough, just place a hyphen (-) after each ~~character~~ character and turn on the ss01 feature in the OpenType settings of the program ~~you~~ you are using. Each weight comes with an additional experimental font: Crickle Spine (see below).

Brushstroke

Brushstroke *

Brushstroke

Crickle Spine is a plain contour to which structures or lines can be added. Simply type your text, convert it to paths and apply a brushstroke or any other (calligraphic) line.

Please note: Spine is experimental! It may or may not work depending on the app and your OS. It does work in Illustrator 2022 on Mac OS 12.
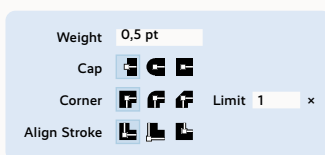

Pro tip: Use Crickle with a small line gap and shift the start of the lines.

Variation Variation

Variation

As Crickle Spine is a monoline you have the option of squeezing and slanting it however you ~~like~~ like. (But don't try this with other typefaces!)

Use a brush available from Illustrator or get one online. There are plenty on offer, and some of them are even free. If you use Adobe CC you may want to create your own brushstroke with Adobe Capture!
